

What happens when your investigation hits

100 MILLION FILES?

AI-powered analysis for large-scale digital investigations

Digital investigations are reaching a new scale

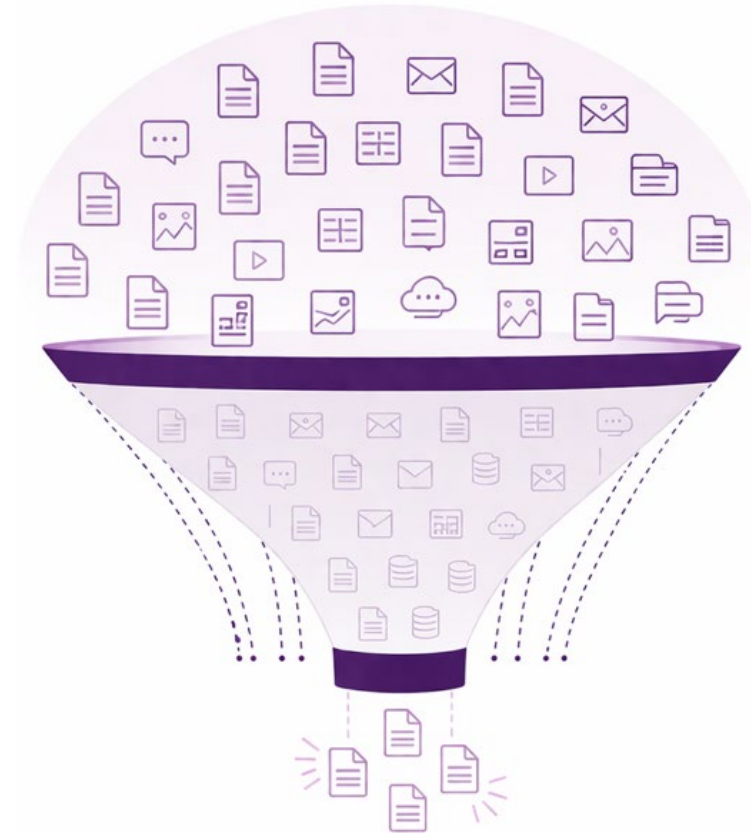

-  **Massive and heterogeneous datasets**
-  **Emails, documents, chats, cloud & mobile**
-  **Tens to hundreds of millions of files**
-  **Complex, nested data structures**
(e.g. archives, PST files, containers)

The bottleneck has shifted from acquisition to analysis.

Where traditional approaches break down

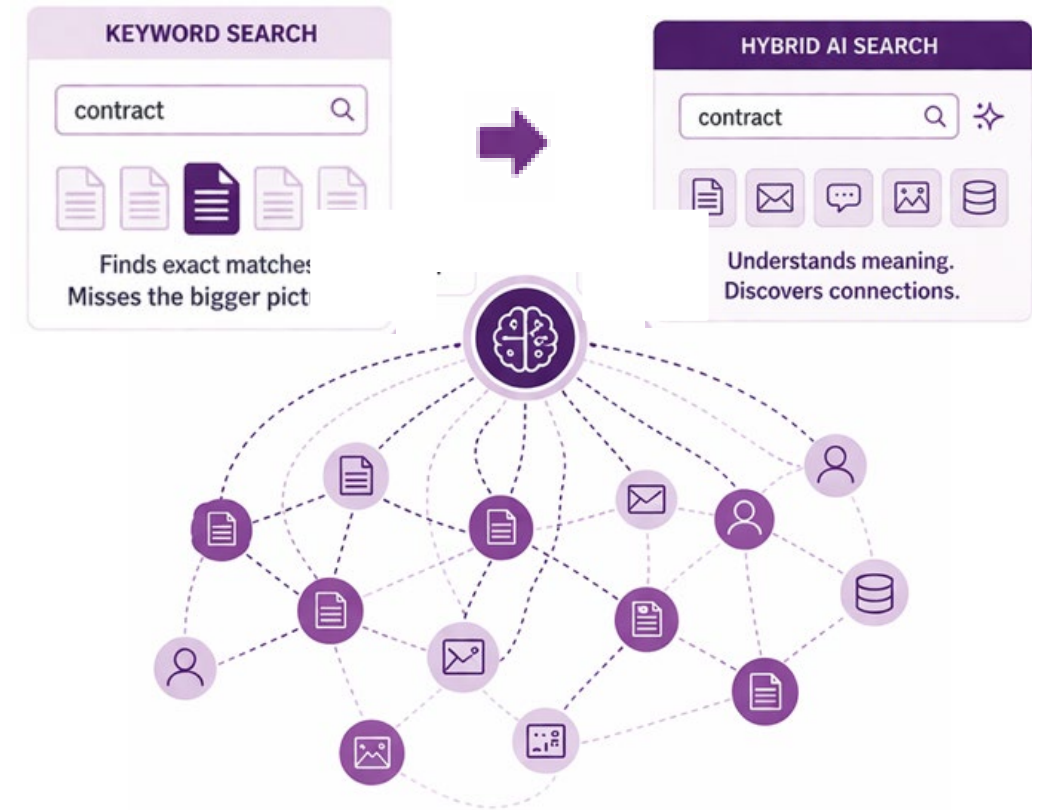

-  **Not all data is processed**
-  **Critical connections remain hidden**
-  **Keyword search **misses context****
-  **Large datasets often lead to implicit sampling due to technical limitations**

**Implicit sampling leads to incomplete data —
and incomplete data leads to wrong conclusions**

From keyword search to hybrid AI discovery

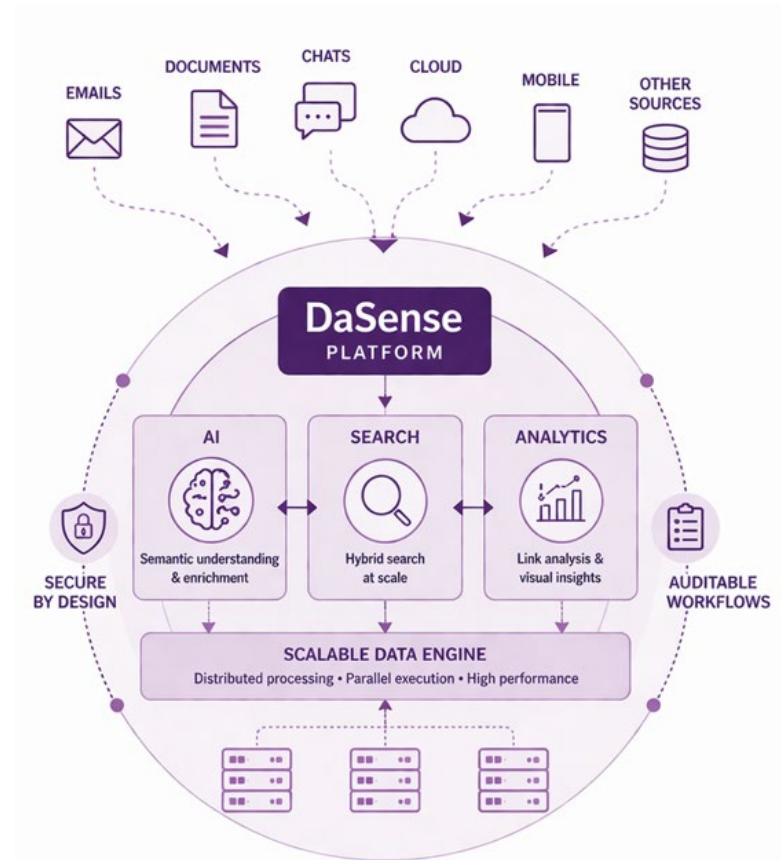

-  **Go beyond exact keyword matches**
-  **Understand context and relationships**
-  **Surface hidden and indirect evidence**
-  **Combine keyword precision with semantic understanding**

Move from searching for known terms to discovering unknown connections.

A platform for scalable AI-driven investigations

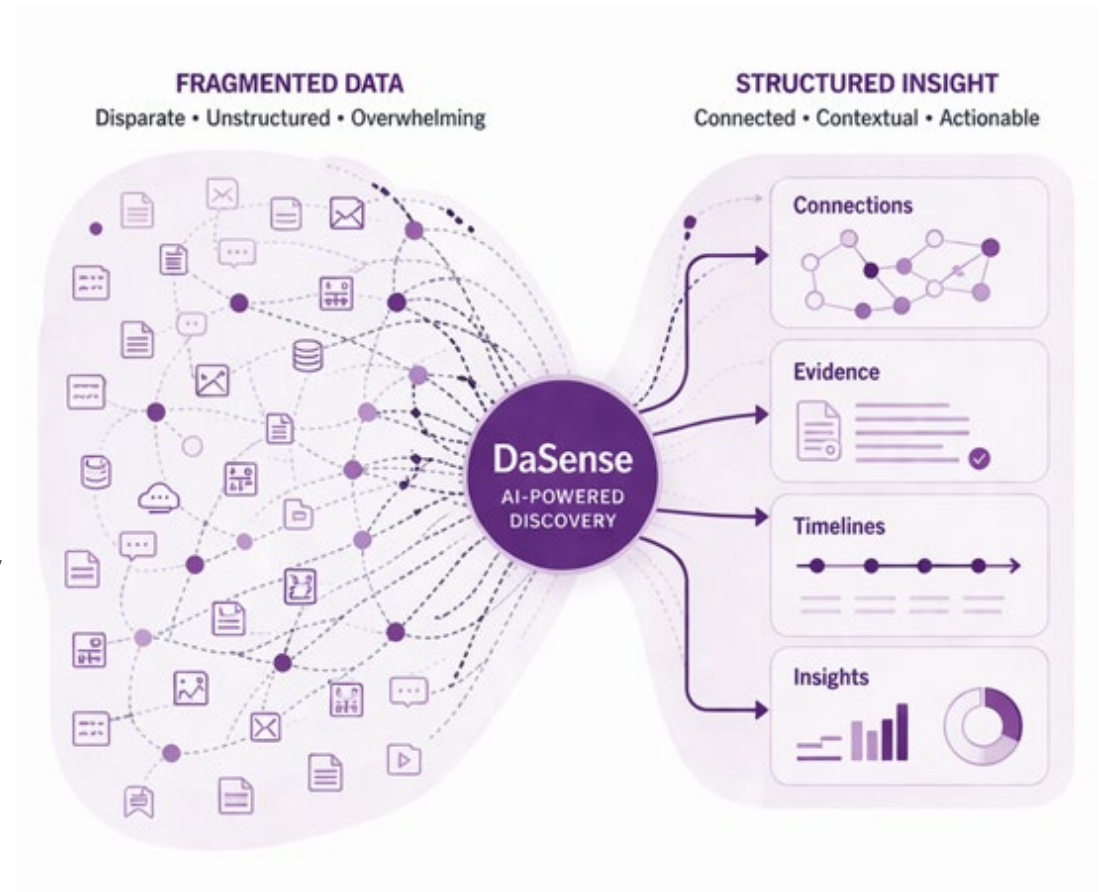

-  **Process hundreds of millions of files**
-  **Combine AI, search, and analytics in one system**
-  **Built on scalable, distributed data processing**
-  **Ensure transparent, auditable and reproducible workflows**

From fragmented tools to integrated, scalable investigation platforms.

From data overload to actionable intelligence

-  **Reveal previously hidden connections**
-  **Uncover critical evidence across datasets**
-  **Reconstruct events and timelines with clarity**
-  **Enable faster and more confident decision-making**

**Turn fragmented data into structured,
actionable intelligence.**

From data to intelligence – at scale

AI & big data consulting for digital investigations

Asset-based solutions powered by DaSense

Custom development for complex data environments

Let's solve your data challenges!

**Schedule a 30-minute intro call to discuss your use case —
tackling big data at scale and unlocking AI-driven insights.**
