

Utilize the strengths of your team

Whether you're working in a local, regional or special office, Griffeye Operations helps to leverage your entire team's collective knowledge, skills and efforts. Alleviate the stress of working a case alone, reduce heavy workloads, and speed up investigations.

**One case.
Multiple users.**

Designed for group efforts on individual cases, Griffeye Operations gives you and your colleagues a digital base of operations for reviewing and analyzing materials.

Key advantages

Unlock efficient collaboration on digital media investigations

- A powerful server connects multiple users, enabling teams to gather knowledge in a centralized place and work together.
- Automated processes help identify and tag material, significantly speeding up the time it takes to process and analyze each case.
- Information from other systems is easily migrated over, as well as exported for easy sharing.
- User access control and extensive audit logs create a secure environment for collaboration.

Focus on what's most important

A streamlined interface assists in the visualization and review of digital media, while advanced algorithms take care of tasks that you previously used to deal with manually.

- Pre-categorize and prioritize information
- Stack duplicates and filter out non-relevant material
- Detect and highlight critical clues
- Identify relationships

Get started with ease

Intuitive and easy-to-use from the start, the user interface enables you and your team to quickly and easily categorize, prioritize and review digital media.

Included resources

Griffeye Brain (AI)

Runs automatically in the background during import and scans through previously unseen footage to detect and flag relevant material, including CSAM, objects and media types.

Griffeye Intelligence Database (GID)

Working in Griffeye Operations, you have access to the GID to seamlessly share intelligence with other investigators—within and across teams.

Griffeye Forensic Market

An extensive digital marketplace gives you access to various valuable apps and add-ons, allowing you to add new functionality as your needs change.

Product integrations

Introducing Magnet Verify capabilities in Magnet Griffeye Operations

Now you can utilize some of the powerful capabilities of Magnet Verify to reveal details about the origin and integrity of a file, by analyzing whether the file is first generation or by identifying whether the file was transmitted, edited, or altered by any known devices or apps.

Match files to known devices and apps

Analyze the file structure by comparing results against the Magnet Verify reference library, which includes data from more than 100,000 media sources including digital cameras, mobile devices, editing software, generative AI, and social media platforms. By comparing the internal structure of the file to this reference library you can identify characteristics of the file's encoding process to indicate whether it is authentic or whether it has been altered or edited.
