

A solution designed for large-scale police collaboration

The Griffeye ecosystem of products is built to enhance information sharing and to build on each other's case work. By applying the right tools that enable collaboration, investigators can better prioritize their efforts, find critical clues faster, and allocate more time and resources to tasks that rely on human skills and knowledge.

Effects of collaboration

- Reduced backlogs and minimized redundancies
- Decreased exposure to harmful material
- Improved outcomes with more identified victims

Collaborative workflows

Enable efficient collaboration and intelligence management with Griffeye Operations and Griffeye Enterprise. Empower your team's efficiency and organizational insight.

Magnet Griffeye Operations

Leveraging your team's strengths

- Utilize a powerful server and enable teams to collaboratively process, manage and investigate cases in a centralized location.
- Harness the collective knowledge, skills and efforts of your entire team to more efficiently handle heavy caseloads.
- Gain full control over your collective data with advanced case security and easy supervisor management.

Magnet Griffeye Enterprise

A central repository for organizational intelligence

- Case data from previous investigations is stored in a unified database accessible to all authorized individuals within the organization.
- The stored knowledge becomes an asset for future cases and remains within the organization beyond personnel changes.
- Detect entities across your entire file database to map relationships and highlight critical clues.

Within Operations and Enterprise, access our cornerstone technology, [GID](#)

Unlocking the powers of the GID

The built-in Griffeye Intelligence Database (GID) is designed to make information sharing a seamless process and to build on each other's casework.

Key advantages of the GID

- Streamline information exchange by eliminating manual processes; easily upload hashes to any shared GID for direct accessibility by other users
- Establish connections to multiple databases, enabling collaboration with investigators nationally or internationally
- The robust, scalable GID engine not only manages exponentially growing data volumes but also accommodates an increasing number of concurrent users

Media descriptions through GID technology

Ease the burdensome process of providing detailed image and video content descriptions for court proceedings with Media Descriptions. Investigators can now add reusable text descriptions to media, streamlining sharing among investigators.
