

FTK® CONNECT Automation For Law Enforcement

Power through case backlogs & accelerate forensic investigations by automating FTK workflows.

Automate case creation and data processing so you can focus on reviewing evidence and closing cases faster!

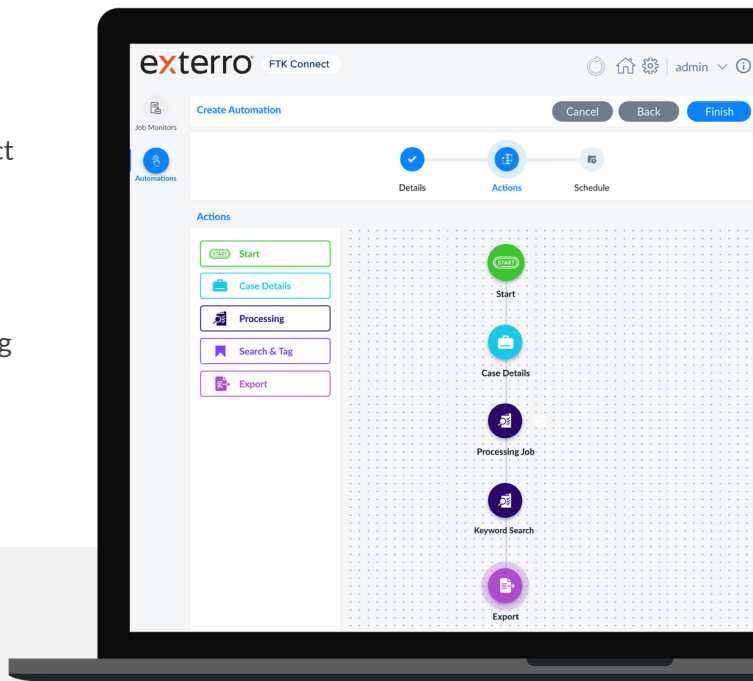

Eliminate time spent waiting for jobs to be completed and get cases to examiners in **half the time** by using FTK Connect to automate case creation and evidence processing, then informing investigators when their jobs are finished. You can even automate next steps, such as searching and labeling results, exporting data, and more – all without any user interaction. With its dramatically simplified interface, users of all skills levels can create powerful time-and money-saving automations without complicated scripting.

FTK Connect handles the mundane tasks, freeing up your skilled and experienced investigators' time for what they do best: forensic analysis and review.

"Scheduling the automation makes use of 16 hours of previously wasted time, from the time an investigator leaves work to when they arrive the next morning."

- John Price, West Midlands Police, UK

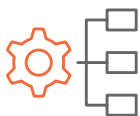

Key Features Include:

Create Automations with Unprecedented Ease

Built for non-programmers, the intuitive drag-and-drop interface allows users of all skill levels to easily create automations for any case type. Be instantly productive with minimal training. No coding or scripting expertise is required.

Automated Processing and Review

Law enforcement agencies can configure FTK Connect to watch a folder or directory and to automatically process any forensic image placed there. It can then search cases, apply labels or bookmarks, and export the resulting files.

Keep FTK Working After Hours

The costs to outfit a forensic lab with state-of-the-art technology is out of reach for most agencies. Make better use of your existing hardware and software investments by using them outside of normal work hours. FTK Connect automations get evidence into the hands of forensic examiners faster, so they can close more cases and reduce backlogs.

Automated Notifications

Keep users informed of case progress with automated processing status updates that notify reviewers via text message or email.

Comply with ISO Accreditation Standards

Reduce the chance for errors and increase the defensibility of investigations by minimizing human interaction during the handling of digital evidence. Consistent, repeatable, reliable automation helps maintain compliance with standards such as ISO 27037, 17020, or 17025.

Create Cost Efficiencies

Eliminate delays that crop up after imaging evidence drives when trained examiners aren't available to perform the next steps. Automation reduces the need to add non-technical staff to manually run basic tasks like creating cases or starting a processing job.

Compatibility

FTK Connect For LEA seamlessly integrates with the standalone version of the FTK Forensic Toolkit. For FTK Lab, FTK Enterprise, and FTK Central customers, there is a full-featured version of FTK Connect that includes additional automation workflows for incident response and internal investigations, plus the ability to integrate with other third-party platforms.
