

PRIVACY SOFTWARE

Streamline your GDPR, CCPA, CPRA and other privacy compliance processes. Quickly and easily identify, map, manage and protect your organization's data.

Organizations don't just need to change their approach, but rather future-proof their strategy to thrive in an ever-changing regulatory landscape. Exterro Privacy helps organizations build, monitor and maintain a defensible privacy program based on an intelligent and dynamic platform that accelerates compliance, simplifies operations, reduces costs, and increases productivity, efficiency and collaboration.

Exterro's unique approach blends services and software, ensuring a successful implementation of our solutions, everytime. The end result is rapid implementation and no shelfware.

Exterro is the only platform to enable governance, risk and compliance for digital data across e-discovery, information governance, digital forensics, cyber compliance and privacy. It is the ideal choice for organizations looking to address data risk everywhere it exists and orchestrate compliance across all areas of the business seamlessly.

Which privacy solution is right for you?

Smart Data Inventory

A complete data inventory is the foundation of your privacy and compliance initiatives. Exterro Smart Data Inventory helps organizations build, monitor and maintain a defensible privacy program based on a single intelligent and dynamic data inventory across record types, assets, third parties and processing activities. This complete business context drives intelligent privacy and information governance capabilities.

Data Retention

Effective, operational data retention programs are the simplest way to reduce security, privacy, and compliance risks. Exterro Data Retention automates the construction and scheduling of a retention program, combining regulation, policy, and industry best practices.

Data Discovery

Exterro Data Discovery shows you the privacy and security risks in your data automatically. The data map pinpoints where personal and sensitive data exists, who has access to it, and which data sets contain policy violations.

Consent

Exterro Consent is the only product designed for the post-cookie world, where ease of integration, flexibility, and positive consumer experiences are the primary requirements. It facilitates complete in-house and third party notification of the Global Privacy Control (GPC) signal when it is asserted by a user's web browser, exactly as required by the CCPA and CPRA.

Data Subject Access Request

Fulfilling data subjects' rights over their data can be a complex process. Exterro Data Subject Access Request is a pre-built framework that automates all of the required tasks for exercising those rights, and provides a pre-built portal for request submission and response. It includes automated data search, review, redaction, and identity confirmation.

Incident and Breach Management

Gain insight into the potential severity of an incident or breach by understanding if affected data contains personally identifiable information (PII) or other sensitive information, which data subjects were affected, associated data processing activities, record types and other critical information. Significantly reduce investigation time and associated costs.

Vendor Risk Profiling

Your third-party relationships are a significant source of risk. It is vital that you have a clear understanding of where data privacy and security risks may exist in those relationships, so you can work with your partner to mitigate them. Exterro Vendor Risk Profiling is an easy-to-use system that automatically collects the correct information from different sources, and identifies risks and necessary remediation.
